Important Information

• Important information regarding your internet subscription

Users who subscribe to limited or "pay as you use" broadband internet access

In the WAN configuration settings, there is a parameter called Maximum idle timer. This parameter controls how many seconds of inactivity before dropping connection to the internet. The default setting is "0" which disables this functionality and the internet will be connected all the time. We suggest that you should change the Maximum idle timer to "300" (5 minutes) so that the device will drop the line after 5 minutes of inactivity and keep usage costs down.

Users who subscribe to unlimited broadband internet access

You can just leave this parameter unchanged or enable Auto-reconnect to be always on line.

Technical Notes:

The Maximum idle timer is only relevant if your ISP is using PPPoE connection.

• Information importante concernant votre abonnement internet

Aux utilisateurs qui ont souscrit un abonnement limité ou avec paiement uniquement à l'utilisation

Au niveau du paramétrage de la configuration WAN, il y a un paramètre appelé Maximum idle timer.

Ce paramètre contrôle le nombre de secondes d'inactivité avec la coupure de la connexion à Internet.

Le paramètre par défaut est à "0", ce qui dévalide cette fonctionnalité et vous connecte à internet tout le temps.

Nous vous conseillons de changer le Maximum idle timer à "300" (5 minutes) de sorte que la ligne soit coupée après 5 minutes d'inactivité pour limiter les coûts.

Aux utilisateurs qui ont souscrit un abonnement internet illimité

Vous pouvez laisser ce paramètre à 0 ou valider l'Auto-reconnexion pour toujours être en ligne.

Note technique :

Le Maximum idle timer est utile uniquement si votre FAI utilise une connexion PPPoE.

• Wichtige Hinweise zur Internet-Verbindung

Benutzer mit „call-by-call“- Breitband-Internetzugang

In der WAN-Konfigurationseinstellung gibt es den Parameter „Maximum idle timer“, mit dem Sie die Zeitdauer einstellen können, nach der eine ungenutzte Internetverbindung getrennt wird. Mit der Standardeinstellung „0“ (Sekunden) ist diese Funktion deaktiviert. Die Internetverbindung wird auch bei Inaktivität aufrechterhalten.

Wir empfehlen Ihnen, die Einstellung des „Maximum idle timer“ auf „300“ (5 Minuten) abzuändern, so dass die Internetverbindung bei Inaktivität nach 5 Minuten unterbrochen wird und die Kosten niedrig gehalten werden.

Benutzer mit Flatrate-Internetzugang

Wenn Sie einen Flatrate-Internetzugang besitzen, können Sie die WAN-Konfigurationseinstellung unverändert lassen oder die Funktion „Auto-reconnect“ aktivieren, um automatisch bei jedem Start des Computers eine Verbindung aufzubauen oder unterbrochene Internetverbindung automatisch wiederherzustellen.

Technische Hinweise:

Der „Maximum idle timer“ ist nur von Bedeutung, wenn Ihr ISP eine PPPoE-Verbindung verwendet.

• Informazione importante riguardante la registrazione in internet

Per gli utenti che sottoscrivono un abbonamento Internet broadband limitato o a "pagamento per il traffico dati effettuato" Nelle impostazioni della configurazione WAN, c'è un parametro chiamato Maximum idle timer. Questo parametro controlla i secondi di inattività prima di chiudere la connessione ad Internet. L'impostazione di default è "0" che disabilita questa funzione cosicché la connessione ad Internet è sempre attiva in ogni momento. Sugeriamo di cambiare il parametro di Maximum idle timer a "300" (5 minuti) cosicché il dispositivo fermerà la connessione dopo 5 minuti di inattività. In questo modo il costo della telefonata sarà ridotto.

Per gli utenti che sottoscrivono un abbonamento Internet broadband illimitato

E' possibile lasciare questo parametro invariato o abilitare la funzione di auto-connessione per rimanere sempre connessi

Nota Tecnica :

Il parametro Maximum idle timer è rilevante solo se l'ISP utilizza una connessione PPPoE

• Información importante acerca de la subscripción a Internet

Los usuarios suscritos, en los parámetros de configuración WAN, a un acceso a Internet de banda ancha

limitado o de "pago por uso", encontrarán un parámetro llamado Maximum idle timer. Este parámetro controla cuántos segundos de inactividad se permiten antes de que se interrumpa la conexión a Internet. El valor por defecto es "0", y desactiva esta funcionalidad, con lo que se estará conectado ininterrumpidamente a Internet.

Se recomienda que se modifique el valor de Maximum idle timer a "300" (5 minutos); así el dispositivo cortará la línea tras 5 minutos de inactividad y se reducirán los costes por uso.

Los usuarios suscritos a un acceso a internet de banda ancha ilimitado pueden dejar este parámetro como se encuentra o bien activar Auto-reconnect para estar siempre conectados.

Notas técnicas:

Maximum idle timer sólo es relevante si el ISP usa una conexión PPPoE.
