Alphabetical Syntax Listing	1
Error Codes	31
Option ROM Syntax	43
Interface Card Registers	44
ASCII Table	52

Mainframe Error Messages

An error in a program sets the program line counter to line 0. Pressing the continue key will continue the program from line 0. Execute the continue command with a line number to continue at any desired line (such as: CONT 50).

- 00 System error.
- 01 Unexpected peripheral interrupt.
- 02* Unterminated text.
- 03* Mnemonic is unknown.
- 04 System is secured.
- 05 Operation not allowed; line cannot be stored (six-cited with line number).
- 06* Syntax error in number.
- 07* Syntax error in input line.
- 08 Internal representation of the line is too long (gives cursor sometimes).

*These errors give a cursor when the CONT key is pressed, indicating the location of the error in the line.

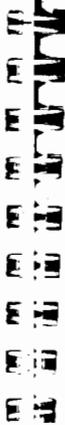

HPL Syntax

Introduction

The following pages are a compilation of all current 9825 HPL syntax. More information on each operation can be found by referring to the indicated manual and page. The manual titles are abbreviated here:

- D Disc Programming (09825-90220).
- I/O I/O Control Reference.
- M Matrix Programming.
- O&P Operating & Programming Reference.

The HPL programming language utilizes four basic types of syntax constructions: **statements**, **functions**, **operators** and **commands**. Operators, such as + and mod, are used with numbers and variable names to construct **expressions** (like A+5). Expressions can be included in many statements and executed from the keyboard. Each statement can also be preceded by a line number and stored as a program line (like 10: prt A). Most functions can include expressions, and can be executed from the keyboard. Functions can also be treated as expressions when constructing a statement (like prt sinA). Commands are operator aids that can only be executed from the keyboard; they're not programmable.

Number in Display ROM

- 1 Binary Program
- 4 Systems Programming
- 6 Strings
- 8 Extended I/O
- 9 Advanced Programming
- 10 Matrix
- 11 Plotter (9862A or 9872A)
- 12 General I/O
- 15 9885 Disk

- 21 Line is too long to store.
 - 22 Improper dimension specification.
 - 23 Simple variable already allocated.
 - 24 Array already dimensioned.
 - 25 Dimensions of array disagree with number of subscripts.
 - 26 Subscript of array element out of bounds.
 - 27 Undefined array.
 - 28 Ret statement has no matching gsb statement.
- *See also Advanced Programming ROM Error Messages.
- *These errors give a cursor when the [F5] key is pressed, indicating the location of the error in the line.

error

- 09 Gto, gsb, or end statement not allowed in present context.¹
- 10* Gto or gsb statement requires an integer.
- 11 Integer out of range or integer required. Must be between -32768 and +32767.
- 12* Line cannot be stored; can only be executed.
- 13 Enter (ent) statement not allowed in present context.
- 14 Program structure destroyed.
- 15 Printer out of paper or printer failure.
- 16 String Variables ROM not present for the string comparison. Argument in relational comparison not allowed.
- 17 Parameter out of range.
- 18 Incorrect parameter.
- 19 Bad line number.
- 20 Missing ROM or binary program. The second number indicates the missing ROM. In the program mode, the line number is given instead of the ROM number.

Operators

The available operators are summarized here. For more details see page 3-19 in your Operating and Programming Reference.

Arithmetic

- + Add
- Subtract, unary -
- * Multiply
- / Divide
- ↑ Exponentiate
- mod Modulus

Logical

- and inclusive OR
- ior exclusive OR
- xor
- not

Relational

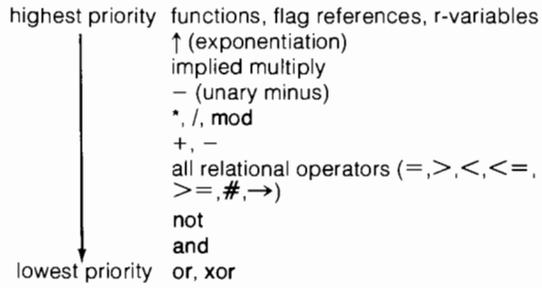

- = Equal to
- ← Assign
- > Greater than
- < Less than
- > = or = > Greater than or equal to
- < = or = < Less than or equal to
- # or > or < or > < Not equal to

String

- & Concatenation

2

Math Hierarchy

Operators of the same level in an expression are executed from left to right. Any operations within parentheses, however, are performed first. For more details, see page 3-18 in your Operating and Programming Reference.

3

ERROR

- 29 Cannot execute line because a ROM or binary program is missing.
- 30 Special function key not defined.
- 31 Non-existent program line.
- 32 Improper data type.
- 33 Data types do not match in an assignment statement.
- 34 Display overflow due to pressing a special function key.
- 35 Improper flag reference (no such flag).
- 36 Attempt to delete destination of a gto or gsb statement.
- 37 Display buffer overflow caused by display (dsp) statement.
- 38 Insufficient memory for subroutine return pointer.¹
- 39 Insufficient memory for variable allocation or binary program.
- 40 Insufficient memory for operation.¹
- 41 No cartridge in tape transport.

42 Tape cartridge is write protected. (Slide record tab to other position for recording.)

43 Unexpected Beginning-Of-Tape (BOT) or End-Of-Tape (EOT) marker encountered; or a tape transport failure.

44 Verify has failed.

45 Attempted execution of ldf statement without parameters or mtk statement when tape position is unknown.

46 Read error of file body. (See Appendix F.)

47 Read error of file head. (See Appendix F.)

48 End-Of-Tape (EOT) encountered before specified number of files were marked.

49 File too small.

50 Ldf statement for a program file must be last statement in the line.

51 A ROM is present but was not when the memory was recorded. Remove the ROM indicated by the number to the right of the error number in the display, and re-execute the ldm statement. In the program mode, the line number is given instead of the ROM number. See error 20 for a list of ROM numbers.

¹See also Advanced Programming ROM Error Messages.

Syntax Conventions

These terms and conventions are used in the following listing:

bold type — all key words and characters appearing in bold type must appear exactly as shown. These items are shown in dot matrix in the referenced manuals.

[] — elements enclosed in brackets (not key characters or parentheses) are optional.

... — an ellipsis indicates that the preceding parameter or sequence in the syntax can be repeated.

variable name — a numeric or string variable name (like A or R5 or A\$). Subscripts are allowed (like A [7]).

array name — an array variable name, with or without subscripts.

string variable — a string variable name (like A\$ or B\$ [1,4]).

string — either a string variable or text within quotes ("text").

line number — an expression from 1 through 999 referring to a program line.

line label — a unique name assigned to a program line. It's enclosed in quotes, follows the line number, and is followed by a colon. For example: 5: "print": ...

expression — a logical combination of numeric variable names, constants, operators and functions (including user-defined functions) grouped within parentheses as needed. The evaluated expression yields a numeric result.

constant — a fixed number within the computer's range, like 2.23467.

character — a letter, number or symbol.

item list — a series of constants, expressions and/or strings separated by commas, for example: prt 5,A,"was",A+7

subscripts — numbers within brackets which are attached to variable names to designate a particular variable element or boundary. For example: A [10,5] or B\$ [1,10]

file number — an expression indicating the tape or disk file.

file name — a string indicating the disk file name.

select code — an expression indicating the device's interface select code setting (an integer from 0 through 16). For example: wrt 6

These select codes are assigned to internal devices:

- 0 Keyboard.
- 1 Tape drive.
- 16 Printer.

device address — a two-digit number appended to the select code, indicating a device's HP-IB address. Device address range is from 01 through 31. For example: wrt 711 outputs to device 11 via the HP-IB interface set to select code 7.

format no. — a number from .1 through .9 appended to the select code to reference a corresponding fmt statement. For example: wrt 7.3 references fmt 3.

return variable — a simple numeric variable name (A or R4) where information is stored after the operation.

flag no. — an expression from 1 through 15 indicating a programmable flag.

61 The line referenced in an ldf or ldp statement does not exist. If the line containing the ldf or ldp statement has been overlaid by the load operation, the line number in the display may be incorrect.

62 Specified memory space is smaller than cartridge file size.

63 Cartridge load operation would overlay subroutine return address in program; load not executed.

64 Attempt to execute ldk, ldf (program file), or ldp during live keyboard statement.

65 File not found, or file specified in the previous ldf statement does not exist.

Default values associated with errors 66 through 77 when you set flag 14 are explained in Chapter 5 of the manual.

66 Division by zero. A mod B with B equal to zero.

67 Square root of negative number.

68 Tan (n * pi/2 (radians)).

69 Tan (n * 90 (degrees)).

70 Ln or log of a negative number.

71 Asn or acs of number less than -1 or greater than +1.

72 Negative base to a non-integer power.

73 Zero to the zero power (0⁰).

error

74 The ROM indicated by the number to the right of the error number was present when the memory was recorded but is now missing. Insert the indicated ROM and re-execute the ldm statement. See error 20 for a list of ROM numbers.

75 Negative parameter in cartridge statement.

76 Binary program to be loaded is larger than present primary program and variables have been allocated. Illegal or missing parameter in one of the cartridge statements.

77 Data list is not contiguous in memory for one of the cartridge statements.

78 Improper file type.

79 Invalid parameter in rcf statement: "SE" or "DB" expected.

80 Attempt to record a program or special function keys which do not exist.

81 Attempt to load an empty file or the null file (type=0).

A

abs expression

Returns the absolute value of the expression. O&P, 3-22.

acs expression

Returns the principal value of the arccosine of the expression in the current angular units. O&P, 3-25.

add (expression , expression)

Returns the sum of the expressions, added in the current numeric mode, decimal (mdec) or octal (mact). I/O, 3-15.

aprt array variable [, array variable [, ...]]

Prints the specified array's elements on the internal printer. M, 8.

ara array variable₁ $\left\{ \begin{matrix} + \\ * \end{matrix} \right\}$ array variable₂] → array variables

Performs the arithmetic operation, element by element, on arrays 1 and 2. The result is stored in array 3. (Example: ara A+B→C). Arithmetic operations can be performed on arrays in place (ara A+B→A), arrays can be copied (ara A→B) and implied multiplication is allowed (ara AB→C). M, 11.

asc expression

Returns the ASCII equivalent of the specified 9825 keycode. O&P, 7-25.

asgn file name, file number [, drive number [, return variable]]

Assigns a number (1 through 10) to an existing disk file name and indicates optional drive number and a return variable (values below). D,3-5.

- 0 File available and assigned.
- 1 File doesn't exist.
- 2 Program file.
- 3 Special function key file.

(cont'd)

- 4 File not defined by 9825.
- 5 Memory file.
- 6 Binary program file.
- 7 File type not defined.
- 8 File number out of range.
- 9 Data file, but logical records not 256 bytes long (98228A ROM only).

asn expression

Returns the principal value of the arcsine of the expression in the current angular units. O&P, 3-26.

expression → variable name₁ [→ variable name₂ [→ ...]]

Assigns the value of the expression to the variable(s). O&P, 3-19.

atn expression

Returns the principal value of the arctangent of the expression in the current angular units. O&P, 3-26.

avd

Disables automatic tape verification. O&P, 5-24.

ave

Enables automatic tape verification (default setting). O&P, 5-25.

avm

Returns the size (bytes) of unused read/write memory. O&P, 4-27.

axe X coordinate , Y coordinate [, X tic [, Y tic]]

Draws axes through the X,Y point, drawing optional tic marks at X tic and Y tic intervals. 9862 Plotter ROM only. I/O, 7-18.

B

band (expression , expression)

Returns the 16-bit result of ANDing the expressions. I/O, 3-12.

beep

Sounds the computer's beeper. O&P, 3-16.

- 96 Attempt to allocate local p-numbers from the keyboard.
- 97 Wrong number of parameters in its: st: ft: or ft: function: st: or ft: parameter must be a string (not a numeric): st: or ft: parameter contains too few characters.
- 98 Overflow or underflow in its function or overflow in its function.
- 99 String Variables ROM missing for st: or ft: functions. These mainframe errors have an additional meaning with the AP ROM installed.
- 09 Attempt to execute a next statement from keyboard while for/next loop using same variable is executed in program or from program while for/next loop using same variable is executed from keyboard. Attempt to call function or subroutine from keyboard.
- 20 P-number reference is negative.
- 22 Non-numeric value in for statement or in its or ft: function.
- 30 Memory overflow during function or subroutine call.
- 40 Memory overflow while using for statement or while allocating local p-numbers.

Advanced Programming ROM
Error Messages

- 74 Storage range overflow.
- 75 Storage range underflow.
- 76 Calculation range overflow.
- 77 Calculation range underflow.

ERROR

- 90 Relational operator in for statement not allowed. No closing apostrophe.
- 91 A for statement has no matching next statement.
- 92 A next statement encountered without a previous for statement.
- 93 Non-numeric parameter passed as a p-number.
- 94 No return parameter for a function call.
- 95 No functions or subroutines running. Improper p-number reference.

HPL Syntax

bit (expression₁ , expression₂)

Returns the binary value of the bit position in expression 2 indicated by expression 1. I/O, 3-15.

boot

Loads 98217A Disk ROM bootstraps from a disc tape to an initialized disk. D, 4-4.

bred (buffer name)

Returns the contents of the specified, active, interrupt buffer. O&P, 7-10.

buf "name" [, buffer size or string variable , buffer type]

Sets up and names a data buffer of either type read/write (no type specified) or the specified type (see below). I/O, 6-6.

Buffer Type	Word	Byte
interrupt	0	1
fast read/write	2	3
DMA	4	—

C

cap (string)

Returns an equivalent string of uppercase characters. O&P, 6-24.

cat [select code or buffer name]

Prints a catalog of files on the specified disk or default drive. File types listed below. D, 1-16.

- B Binary program file.
- D Data file.
- K Special function keys file.
- M Memory file.
- O Other file (not created via 9825).
- P Program file.

cfg [flag no. [, ...]]

Clears either all 15 program flags or only the specified flags. O&P, 3-29.

chain file name [, 1st line number [, 2nd line number]]

Loads a program from the specified disk file. Same optional line numbers as get. D, 2-7.

8

char (expression)

Returns the ASCII equivalent character. O&P, 6-20.

cli select code

Sends the abort message to all devices on the HP-IB, I/O, 2-27.

cli 'name' [(variable₁ [, variable₂ [, ...]])]

Calls the subroutine having the specified label, passing the value of any optional variables as pass-parameters. O&P, 4-10.

cln

Returns the current program line number. O&P, 7-28.

clr select code

Sends the clear message, either the all devices or to only a selected device by including the device address in the select code. I/O, 2-17.

cmd select code , "address parameters" [, "string"]

cmd "device name(s)" or select code [, "string"]
Sends the string of data characters to the specified HP-IB device. I/O, 2-31.

cmf [flag no. [, ...]]

Complements either all 15 program flags or only the specified flags. O&P, 3-29.

cmp (expression)

Returns the 16-bit binary one's complement of the expression. I/O, 3-13.

cont [line number or "line label"]

This command continues program execution, either from the current point or from the specified point. O&P, 2-24.

conv [expression₁ , expression₁

[, expression₂ , expression₂] ...]

Sets up a conversion table (up to 10 sets of expressions) referenced by red and wrt statements. Each expression represents an ASCII character. conv (no parameters) cancels any existing table. I/O, 1-23.

9

Systems Programming ROM

Error Messages

- E0 Missing General or Extended I/O ROM.
- E1 Incorrect number of parameters.
- E2 Improper parameter specified.
- E3 Wrong parameter type.
- E4 Illegal buffer type for bred statement.
- E5 Key buffer overflow.
- E6 Too large or wrong sign of parameter.
- E7 Improper execution of store statement.
- E8 Illegal use of kret.
- E9 Missing 98036A Interface card.

Extended I/O ROM Error Messages

- E0 General I/O ROM missing.
- E1 HP-IB error under interrupt.
- E2 Wrong number of parameters.
- E3 Improper buffer device or equate table usage.
- E4 Multiple-listeners error.
- E5 Buffer busy.
- E6 Wrong parameter type.
- E7 Timeout error.
- E8 Buffer underflow or overflow.
- E9 Parameter value out of range.
- E0 Parity failure.
- E1 Improper use of first statement.
- E2 Attempt to DMA with an HP-IB.
- E3 Buffer or select code is busy.
- E4 Illegal HP-IB operation.

HPL Syntax

copy source file [, drive number [, select code]]
destination file [, drive number [, select code]]
Copies a file to another location. D, 4-7.

copy [source drive number [, select code],]
"to" [, destination drive number [, select code]]
Duplicates the contents of the source disk onto the destination disk. D, 4-7.

copy source file number , record number ,
destination file number , record number , records
Copies only the specified number of records, beginning at the specified record numbers. D, 4-10.

cos (expression)
Returns the cosine of the expression. O&P, 3-25.

cpit [character-space widths , character-space heights]
Moves the pen the specified distance away from the current point. I/O, 7-41.

csiz [height [, aspect ratio [, paper ratio
[, angle of rotation]]]]
Specifies the size, shape and lettering direction for lbl statements. Defaults are: height = 1.5% of paper height; aspect ratio = 1; paper ratio = 1; angle = 0 (left to right lettering). I/O, 7-38.

CSV
Clears simple variables A through Z. O&P, 3-39.

ctbl [string variable]
Sets up a conversion table; the value of each string character represents ASCII; the character position represents the foreign code + 1. ctbl with no parameters cancels the table. I/O, 4-6.

D

deg
Sets degrees units for angular calculations. O&P, 3-25.

10

del line number [, 2nd line number [, *]]
This command deletes either the specified program line or all lines through the optional 2nd line number specified. Including the * changes all remaining references to the deleted lines to the next remaining program line, preventing error 36. O&P, 2-25.

dev "name" , select code
Assigns a name for use in place of the select code in I/O operations. I/O 2-9.

dig X , Y [, return variable]
Reads, computes and stores the current pen position in user units. Return variables: 0 = pen up; 1 = pen down. 9872 Plotter ROM only. I/O, 7-48.

dim variable name [, variable name [, ...]]
Reserves memory for specified variables. Use subscripts to indicate size of each variable. O&P, 3-37.

dirC
Copies the spare disk directory (default drive) to the main directory. 98217A ROM only. D, 4-16.

drive unit no. [, select code]
Sets the default unit and, optionally, the select code for disk operations. Default is 0,8 for 9885 and 0,707 for 9895. D, 1-14.

drnd (expression , expression)
Returns the value of the first expression, rounded to the number of digits indicated by the second expression. O&P, 3-22.

dsp item list
Displays the items listed. To display quotes use double quotes within the string (e.g., 1: dsp "Display""test""in quotes."). O&P, 3-12.

dto (expression)
Returns the octal equivalent of the decimal value expressed. I/O, 3-12.

dtrk [tape file number]
Dumps a bad track during the 98217A error recovery routine. 98217A ROM only. D, 4-15.

11

General I/O ROM Error Messages

error

- G1 Incorrect format numbers.
- G2 Referenced format statement has an error.
- G3 Incorrect I/O parameters.
- G4 Incorrect select code.
- G5 Incorrect read parameter.
- G6 Improper conv statement parameters.
- G7 Unacceptable input data.
- G8 Peripheral device down.
- G9 Interface hardware problem.

Matrix ROM Error Messages

error

- M1 * Syntax error.
- M2 Improper dimensions. Array dimensions incompatible with each other or incompatible with the stated operation.
- M3 Improper redimension specification. New number of dimensions must equal original number; New size cannot exceed original size.
- M4 * Operation not allowed. An array which appears to the left of → cannot also appear on the right.
- M5 Matrix cannot be inverted. Computed determinant = 0.

*These errors give a cursor when the  key is pressed, showing the location of the error in the line.

HPL Syntax dtype

Returns a code indicating the type of drive, disk and data format at the default disk address. 98228A ROM only. See page 1-15. Return values are:

- 0 Unable to access default disk controller.
- 1 Drive door is open or drive not present.
- 2 Drive door closed, but door was opened since last disk operation. File pointers are cleared.
- 3 9895 drive, single-sided disk, HP format.
- 4 9895 drive, double-sided disk, HP format.
- 5 9895 drive, single-sided disk, unknown format.
- 6 9895 drive, double-sided disk, unknown format.
- 7 9895 drive, single-sided disk, IBM 3740 format.
- 8 9885 drive, single-sided disk.

dump [file name , tape file name][, expression]

Transfers the contents of the default disk to a tape cartridge. The optional file names indicate to only dump a specified file. The expression can be 1 or 10, indicating the number of disk records to put in each tape file. A positive expression automatically marks the tape. A negative expression suppresses marking the tape. D, 4-12.

E

eir select code [, byte]

Enables an interrupt from the specified select code. Specifying byte = 0 disables the interrupt. I/O, 5-6.

end

Halts program execution and sets the program counter to 0. O&P, 3-17.

enp ["prompt",] string variable

Enters and prints data entered from the keyboard. O&P, 3-15.

ent ["prompt",] variable name

Enters data from the keyboard. O&P, 3-13.

eol code [, [, ...]] [, - delay in milliseconds]

Specifies up to seven optional ASCII characters for an end-of-line sequence for wrt operations (replaces CR/LFs). The optional delay occurs after the last eol

12

character in the sequence. O&P, 7-12.

eor (expression , expression)

Returns the 16-bit binary result of the exclusive ORing of the expressions. I/O, 3-13.

equ "name1", "string1" [, "name2", "string2" [, ...]]

Equates the ASCII character string with the name, for use with cmd. I/O, 2-33.

erase [letter or key]

Erases either all programs and variables or the specified areas listed below. O&P, 2-26.

- a Erase entire memory.
- k Erase all special function keys.
- v Erase all variables and flags.
- fn Erase specified key definitions.

ert file number

Erases the current tape track, beginning with the specified file. O&P, 5-15.

exp (expression)

Returns e (2.71828...) raised the expressed power. O&P, 3-24.

F

fdf file number

Positions the tape at the specified file on the current track. O&P, 5-9.

fetch [line number or key]

Displays the specified program line or special function key definition. O&P, 2-27.

files file name: [: unit no.] [, file name2 [: unit no.] [, ...]

Assigns names up to 10 disk files. Substituting an * for a file name allows an asgn statement to assign a file name via a string variable. D, 3-3.

flg (flag no.)

Returns flag status: 1 = set; 0 = clear. O&P, 3-30.

flt expression

Sets floating point notation; from 0 through 11 places allowed. O&P, 3-10.

13

9862A Plotter ROM Error Messages

error

P1 Wrong state. Statements executed out of order. (See Appendix in ROM manual.)

P2 Wrong number of parameters.

P3 Wrong type of parameters. Parameters for a label statement must be expressions, text, or string variables.

P4 Scale out of range. Maximum value is less than or equal to the minimum value.

P5 Integer out of range. Pen control parameter is out of the range -32768 to +32767 or the select code is not 0 nor in the range of 2 through 15.

P6 Character size out of range. Width or Height in letter statement is zero or there is an integer overflow in size calculations or results.

P7 Not used.

P8 Axes origin off-scale. X, Y specified for axis statement doesn't fall on plotter surface.

An explanation of the error message **PLT DOWN** is in the manual.

9872A Plotter ROM Error Messages

error

P1 Attempt to store into constant. Occurs when one or more parameters in a **dis** instruction are constants rather than variables.

P2 Wrong number of parameters. Occurs on instructions with numeric-only parameter lists (**scil**, **of**, **sl**, **ir**, **cr**, **xx**, **xx**, **lin**, **dis**, **col**, **line**, **pen**, and **psc**). In certain unusual cases where a parameter list contains user-level function calls, an instruction having an incorrect number of parameters may be executed.

P3 Wrong type of parameter or illegal parameter value.

P4 No HP-IB device number specified. Occurs on a **res** instruction when the parameter is between 0 and 14 inclusive and an HP-IB card is at the corresponding select code.

P5 Pen control value not in -32768 thru 32767 range. Occurs on **pl** and **lelt**. May also occur if hardware transmission error occurs between plotter and calculator.

HPL Syntax

fmt [format no. ,] [spec₁ [, spec₂ ...]]

Sets up a list of format specs for red and wrt operations. Format number can be from 0 through 9. Format specs are listed below. Omitting specs cancels specified format. Omitting format no. sets format 0. A repeat factor can precede each spec. I/O, 1-8.

b Single-character binary output.
cw String character data.
ew.d Exponential format.
fw.d Fixed-point.
fzw.d Fixed point with leading zeros.
x Blank space.
z Suppresses auto CR/LF.
/ Outputs CR/LF.
"text" Outputs text.

w = field width.

d = number of digits to right of decimal point.

for simple variable = initial value **to** value [**by** step value]
Defines start of a for-next loop. O&P, 4-3.

frc (expression)
Returns the fractional part of the expression. O&P, 3-22.

fti (expression)
Rounds and changes the expression to integer precision. The result can be stored in a two-character field. O&P, 4-26.

fts (expression)
Changes the expression to split precision for storage in a four-character field. O&P, 4-20.

fxd expression
Sets the fixed-point format; from 0 through 11 places are allowed. O&P, 3-9.

G

get file name [, 1st line no. [, 2nd line no.]]
Loads the program from the specified disk file. D, 2-4.

14

getb file name
Loads the specified disk binary program file. D, 2-11.

getk file name
Loads the special function keys disk file. D, 2-9.

getm file name
Loads the specified disk memory file. D, 2-10.

grad
Sets the grads units for angular calculations. O&P, 3-25.

gsb line number or line label
Branches program execution to the specified subroutine. O&P, 3-34.

gsb + or - no. of lines
Branches to the subroutine beginning the number of lines relative to the current line. O&P, 3-34.

gto line number or line label
Sends program execution to the specified line. O&P, 3-31.

gto + or - no. of lines
Sends execution to specified line relative to the current line. O&P, 3-31.

idf file number [, file type [, current size [, absolute size [, track]]]]
Returns info on the current tape file. See tlist for file types. O&P, 5-7.

idn array name [, array name [, ...]]
Creates identity (square) matrices. All elements are 0 except major diagonal elements which are 1. M, 22.

if expression₁ = expression₂ ;
If the equation is true, the rest of the line is executed. If false, execution immediately branches to the next line. Any relational operator can be used (< , # , > = , etc.). When both expressions are strings, the characters are compared using ASCII values. O&P, 3-36.

15

ERROR

P6 No HP-IB card at specified select code. Occurs on P&C instruction when the interface card set to the specified select code is not an HP-IB card.

P7 0xE, 1xF instructions executed. Occurs on 0xE and 1xF instructions because the ROM recognizes these instructions but cannot execute them. This error flags all 0xE and 1xF instructions for the purpose of converting 9825/9872 programs.

P8 Calculator STOP key cancelled operation. Occurs on any instruction when the plotter fails to respond for 3 seconds after the STOP key has been pressed. This error is most likely to occur when the pen is travelling slowly.

P9 Transmission error. The calculator has received an illegal ASCII input from the plotter.

P1 Instruction not recognized. The plotter has received an illegal character sequence.

P2 Wrong number of parameters. Too many or too few parameters have been sent with an instruction.

P3 Bad parameter. The parameters sent to the plotter with an instruction are out of range for that instruction.

P4 Illegal character. The character specified as a parameter is not in the allowable set for that instruction.

P5 Unknown character set. A character set out of the range 0 thru 4 has been designated as either the standard or alternate character set.

P6 Position overflow. An attempt to draw a character or perform a cplot that is located outside of the plotter's numeric limit of -32768 to +32767.

Error messages generated by write (wrt) and read (red) statements will typically be displayed as an error in the next executed plotter ROM statement. This can be avoided by using an output error command (wrt select code, "DE") followed by a read statement (red select code, variable) to check for errors after read or write statements that address the plotter.

HPL Syntax

- ina** array variable [: value] [, array variable [: value] ...]
Initializes each element of the array to the specified value (number or variable). Omitting the value initializes each element to 0. M, 8.
- init**
Runs the disk initialization routine and loads bootstraps. 98217A ROM only. D, 4-2.
- init** drive number , select code [, interleave factor]
Initializes disks in either 9885 or 9895 drive. 98228A ROM only. The interleave can be an integer from 1 thru 29. See page 4-3.
- int** (expression)
Returns the integer value of the expression. O&P, 3-22.
- inv** array variable₁ → array variable₂ [, simple variable]
Stores the inverse matrix of array 1 in array 2. If the simple variable is specified, the determinant of array 1 is returned. M, 24.
- iof** select code
Returns interface flag state: 0 if peripheral busy; 1 if ready. I/O, 4-12.
- ior** (expression , expression)
Returns the 16-bit result of the inclusive OR operation on the expression. I/O, 3-13.
- ios** select code
Returns interface status: 0 if in error condition; 1 if operational. I/O, 4-12.
- iplt** X increment , Y increment [, expression]
Moves the pen the number of X and Y units from its current position. The expression is for pen control; see plt. I/O, 7-29.
- iret**
Ends an interrupt service routine and returns to main program. I/O, 5-7.
- itf** (string variable)
Returns a full-precision number from the packed, integer-precision number (a two-character string). O&P, 7-26.

16

J

- jmp** expression
Jumps program execution the relative number of lines forward (+ expression) or back (- expression). jmp 0 returns execution to the beginning of the current line. O&P, 3-33.

K

- key**
Returns the earliest, unprocessed keycode in the keyboard buffer. 0 indicates no keycodes in the buffer. O&P, 7-8.
- kill** file name
Purges the specified disk file. D, 1-18.
- killall**
Purges all disk user files. 98217A ROM only. D, 1-18.
- killall** drive number , select code
Purges all user files from the specified disk. 98228A ROM only. See page 1-18.
- kret**
Returns execution to the main program after the key buffer is emptied. O&P, 7-9.

L

- lbl** expression or "string" [, expression or "string" [, ...]]
Prints characters on the plotter. I/O, 7-36.
- lcl** select code
Sends the local message to all HP-IB devices or, if the select code includes a device address, sends a clear lockout/local message. I/O, 2-20.
- ldb** file number
Loads a binary program from the specified tape file. O&P, 5-23.
- ldf** [file number [, line number₁ [, line number₂]]]
Loads the specified tape file into the appropriate area of memory. The optional line numbers indicate where to start loading (line number 1) and continuing (line number 2) a program. Omitting the file number loads file 0. O&P, 5-18.

17

String Variables ROM Error Messages

error

- 00 Invalid set of strings in data list of load file (ldf) statement.
- 01 Improper argument for string function or string variable.
- 02 More parameters than expected for string function or string variable.
- 03 Accessing or assigning to non-contiguous string.
- 04 num function of null string.
- 04 Trying to find the value of non-numeric string or null string. Exponent too large. Exponent format invalid (e.g., 1e++ +5).
- 05 Invalid destination type for string assignment.
- 06 Parameter is zero, negative, exceeded dimensioned size. Invalid sequence of parameters for string variable.
- 07 String not yet allocated.
- 08 String previously allocated.
- 09 Maximum string length exceeded; additional string length must be specified in dim statement.

Disk ROM Error Messages

Hardware Errors

error

- 00 Firmware/driver out of synchronization. More than six defective tracks in a row. (Press **ESC**)
- 01 All drives in system not powered.
- 02 Door opened while disk is being accessed.
- 03 Disk not in drive or no such drive number.
- 04 Write not allowed to protect disk.
- 05 Record header error. (Use Error Recovery Routine.)
- 06 Track not found. (Use Error Recovery Routine.)
- 07 Data Checkword error. (Use Error Recovery Routine.)
- 08 Hardware failure. (Press **ESC**)
- 09 Verify error due to drive problem. Marginal data. (Reprint data)

HPL Syntax

ldf [file number [, data list]]
Loads data from the specified tape file into the listed variables. O&P, 5-21.

ldk [file number]
Loads the special function key file into memory. Omitting the file number loads tape file 0. O&P, 5-22.

ldp [file number [, line number₁ [, line number₂]]]
Loads a program from either file 0 (file number omitted) or the specified file. The optional line numbers indicate where to start loading (line number 1) and where to start running (line number 2). O&P, 5-18.

len (string variable)
Returns the character length of the string. O&P, 6-14.

lim [X lower left, X upper right, Y lower left, Y upper right]
Restricts plotter pen movement to the stated bounds in user units. If bounds are omitted, movement is limited to the mechanical limits. 9872 Plotter ROM only. I/O, 7-34.

line [pattern number [, pattern length]]
Specifies the type of line plotted with plt, iplt, xax and yax. 9872 patterns are listed below. Pattern length is percentage of the total line length; default is 4%, 9872 Plotter ROM only. I/O, 7-32.

- 1 — (dotted)
- 2 — - - - - - (dashed)
- 3 — - - - - - (dashed)
- 4 — - - - - - (dashed)
- 5 — - - - - - (dashed)
- 6 — - - - - - (dashed)
- omit
- number — _____ (solid)

list [# select code] [, line number [, line number]]
Lists the entire program on the internal printer (no parameters) or lists the program to the specified select code. The line numbers indicate starting and ending lines for the listing. O&P, 3-39 and I/O, 1-23.

list  or **listk**
Lists the special function key definition (list ) or all definitions (listk). O&P, 3-39.

lkd
Disables live keyboard mode. O&P, 2-32.

lke
Enables live keyboard mode. O&P, 2-32.

llo select code
Sends the local lockout message to all HP-IB devices. I/O, 2-19.

ln (expression)
Returns the natural log (log_e) of the expression. O&P, 3-24.

load [disk file name , tape file number]
Loads files previously dumped to a tape back onto the disk. Omitting all parameters loads the entire dump back onto the disk. Including parameters loads only selected data files back onto the disk. D, 4-13.

log (expression)
Returns the common log (log₁₀) of the expression. O&P, 3-24.

ltr X coordinate , Y coordinate [, HWD]
Moves the 9862 plotter pen to the specified point and specifies dimensions for lettering. H and W can be from 1 through 9. D is lettering direction and can be from 1 through 4. 9862 Plotter ROM only. I/O, 7-47.

ltrk
Returns corrected data to a reinitialized track during disk error-recovery routine. 98217A ROM only. D, 4-15.

M

mat array variable₁* array variable₂ → array variable₃
Array multiplication (arrays must have correct dimensions). M, 19.

max (expression [, expression [, ...]])
Returns the largest value in the list. O&P, 3-22.

mdec
Sets the decimal mode (default) for binary operations. I/O, 3-11.

ERROR

D0	Improper file size (negative, 0 or >32767).
D3	Invalid file name.
D4	File not found.
D5	Duplicate file name.
D6	Wrong file type.
D7	Directory overflow.
D8	Insufficient storage space on disk.
D9	Verify error due to cable, calculator or drive problem. Bad data (Reprint data.)
F0	File overflow when read or print executed.
F1	File overflow when read or print executed.
F2	File overflow when read or print executed.
F3	String read but wrong data type encountered.
F4	Attempt to read data item but type doesn't match.
F5	Availability table overflow. (Repack)
F6	Attempt on end branch from other than running program.
F7	Unassigned data file pointer.
F8	Disk is down so line cannot be reconstructed.

Software Errors

ERROR

D0	Improper argument.
D1	Argument out of range.
D2	Improper file size (negative, 0 or >32767).
D3	Invalid file name.
D4	File not found.
D5	Duplicate file name.
D6	Wrong file type.
D7	Directory overflow.
D8	Insufficient storage space on disk.
D9	Verify error due to cable, calculator or drive problem. Bad data (Reprint data.)
F0	File overflow when read or print executed.
F1	Booststraps not found. (Reload booststraps)
F2	String read but wrong data type encountered.
F3	Attempt to read data item but type doesn't match.
F4	Availability table overflow. (Repack)

HPL Syntax

min (expression [, expression [, ...]])
Returns the smallest value in the list. O&P, 3-22.

moct
Sets the octal mode for binary operations. I/O, 3-11.

mrk number of files , file size [, return variable]
Marks the number of files, beginning at the tape's current position. The last file number marked is returned in the optional return variable. O&P, 5-10.

N

nal
Returns the last program line number plus one; used with store to store strings. O&P, 7-24.

next simple variable
Terminates for-next loop and tests for loop completion. O&P, 4-3.

nor [line number [, line number]]
Clears the master program flag, either while executing all lines (omit all parameters) or only for the specified line numbers. O&P, 3-44.

num ("character" or substring)
Returns the ASCII-decimal value of the character. O&P, 6-21.

O

ofs X coordinate , Y coordinate
Offsets the origin (0,0) to point X,Y. I/O, 7-27.

on end file number , line number or label
Enables a branch to the specified line or label when a disc EOF or EOR mark is encountered during read and write operations. D, 3-19.

on err "line label"
Enables an error-trapping routine. The program branches to the label and the erl, ern and rom functions are assigned values when an error occurs. I/O, 4-4.

on key ["line label" [, flag no.]]

Enables a keyboard interrupt routine. The program branches to the label and optionally sets the flag when the keyboard buffer overflows. Omitting all parameters disables the keyboard interrupt. O&P, 7-6.

oni select code , "label"
References an interrupt service routine associated with the peripheral's select code. I/O, 5-5.

open file name , number of records
Creates a disk data file of the specified size. D, 3-2.

otd (expression)
Returns the decimal equivalent of the octal value expressed. I/O, 3-12.

P

par (expression)
Sets the parity type (listed below) used for I/O checking. I/O, 4-9.

0	Parity disabled.	2	Even parity.
1	Parity = 1.	3	Odd parity.

pclr
Sets default plotter values except scale units, select code, P1, P2, pen location and pen#. 9872 Plotter ROM only. I/O, 7-10.

pct select code
Passes active control to the specified HP-IB device. I/O, 2-26.

pen
Raises the plotter pen. I/O, 7-22.

pen# [expression]
Selects the plotter pen (1 through 4). 9872 Plotter ROM only. I/O, 7-22.

- error**
- F5** Attempt on end branch from other than running program.
- F6** Unassigned data file pointer.
- F7** Disk is down so line cannot be reconstructed.
- F8** Disk is down and **[M]** pressed.
- F9** System error. (Save files individually and reinitialize.)
- SPARE DIR.**
is printed when the spare directory in the backup track automatically replaces the main directory.
- DISK IS DOWN**
is displayed when running a program that uses a drive number of a drive that is not connected to the system, not powered or whose door is opened.
- error**
- B0** Wrong syntax, argument out of range or variable not properly dimensioned.
- B1** More than six defective tracks on the disk.
- B2** Verify error. Boots on the disk not identical to boots on the cartridge.
- B3** dirt or tint not allowed because error information lost or error not d5, d6, d7 or d9.
- B4** Attempt to access record for error correction which isn't part of data file.
- B5** Improper string length (inconsistent with length given in header).
- B6** Not enough space in calculator buffer for data item or item can't be placed in this part of buffer.
- B7** Missing Disk or String ROM.
- B8** Track still bad after tint.

These errors may result during the binary initialization and Error Recovery Routines.

HPL Syntax

% string [:]

The % free-text prefix allows storing text without syntax checking. Free text is terminated with a semicolon or end of line. O&P, 7-25.

plt X coordinate , Y coordinate [, expression]

Move plotter pen to specified X,Y point. Optional expression controls pen (see below). I/O, 7-22.

even lowers pen.
odd raise pen.
positive action before plotting.
negative action after plotting.

pol select code

Conducts a parallel poll on the HP-IB. I/O, 2-25.

polc select code , byte

Sets parallel poll bits on the specified HP-IB device. I/O, 2-26.

polu select code

Clears parallel poll bits on the specified device. I/O, 2-26.

pos (string₁ , string₂)

Returns the character position of the second string within the first. O&P, 6-16.

prnd (expression , expression)

Returns the first expression rounded to the power of ten indicated by the second expression. O&P, 3-22.

prt expression or string [, expression or string [, ...]]

Prints the list of items on the internal printer. To print quotes (e.g., 3: prt "print""text""in quotes."). O&P, 3-12

psc select code

Sets the select code for all plotter ROM operations. psc 0 causes either the program to ignore all plotter operations (9872 ROM) or the computer to suppress output to plotter (9862 ROM). I/O, 7-5.

ptyp

Sets a plotter lettering mode. Press STOP key to terminate mode. I/O, 7-45.

R

rad

Sets radians units for angular calculations. O&P, 3-25.

√(expression)

Returns the square root of the expression. O&P, 3-22.

rcf [file number [, line number

[, line number]] [, "SE" or "DB"]]

Records either all program lines onto the specified tape file (no line numbers) or only the specified block of lines. Including SE prevents the program from being listed or displayed when reloaded. Including DB records all trace and stop flags with the program for debugging. O&P, 5-16.

rcf file number , variable list

Records the listed variables onto the tape file. O&P, 5-16.

rck file number

Records the special function key definitions on the tape file. O&P, 5-22.

rcm file number

Records the entire computer memory on the specified tape file. O&P, 5-22.

rdb (select code)

Returns one 16-bit binary character code from the specified device. I/O, 3-4.

rdi (register number)

Returns a status byte from the interface specified by wti 0. I/O, 4-12.

These mainframe errors take on additional meaning when the Disk ROM is installed.

ERROR

03 Mnemonic not found because disk may be down.
09 Line can't be executed because ROM (usually String) is missing.
01 Line not found.
50 Get or chain should be last statement in a line.
51 ROM now installed which wasn't when saved was executed.
52 ROM now missing which wasn't when saved was executed.
03 Disk load operation would overlay gsb return address so load not executed.
04 Get, chain or getk not allowed from live keyboard mode or during an ent statement.

HPL Syntax

- rdm** array variable [, array variable [, ...]]
Redimensions the array(s) to the specified dimensions. M, 16.
- rds** (select code)
Returns the current status word from the specified interface. I/O, 3-5.
- red** select code [. format no.] , variable list
Reads and stores data from the specified device. I/O, 1-5.
- rem** select code
Sends the remote message to either all HP-IB devices or only one device when its address is included in the select code. I/O, 2-18.
- renm** old file name , new file name
Renames a disk file. D, 28.
- repk**
Repacks user files on the default disk. D, 4-5.
- res**
Returns the result of the last keyboard operation not stored in a variable. O&P, 2-20.
- resave** file name [, 1st line number [, 2nd line number]]
Stores a program (or only the specified lines) in an existing disk file. D, 2-9.
- ret**
Ends a subroutine and returns program execution to the main program (line after gsb). O&P, 3-34.
- rew**
Rewinds the tape. O&P, 5-6.
- rkbd** select code [, expression]
Enables a remote keyboard to control the computer. The expression indicates the keycode interpretation: 0 = ASCII (default) or 1 = 9825 keycodes. O&P, 7-24.

- rnd** (expression)
Returns a pseudo-random number from 0 to (less than) 1. A negative expression is used as a new seed. O&P, 3-22.
- rot** (expression₁ , expression₂)
Returns the result of binary rotation of the 16-bit equivalent of expression 1, rotated the number of bits indicated by expression 2. I/O, 3-13.
- rprt** file number , record number [, data list]
[, "end" or "ens"]
Prints the list of data items on the disk file, starting at the specified record. Including "end" prints an EOF mark after the data. Including "ens" suppresses the automatic EOR mark printed after data. D, 3-12.
- rqs** select code , byte
Requests service from the HP-IB system controller and sends the serial status byte upon response to a serial poll. I/O, 2-21.
- rread** file number , record number [, variable list]
Reads data from the disk file, starting at the specified record. D, 3-15.
- rss** (select code)
Returns the 98036 Interface status register byte. O&P, 7-16.
- run** [line number or "label"]
Begins program execution, either at line 0 or at the specified line. O&P, 2-9.

S

- save** file name [, 1st line number [, 2nd line number]]
Stores either the entire program on the disk file or only the specified block of lines. D, 2-2.
- savek** file name
Stores all special function key definitions on the disk file. D, 2-9.
